Subject: Fish tagging recovery times

Karl we observed that the biologists have been releasing the tagged fish based on observations of normal fish behavior and not always keeping the fish for the full 2-hour observation period. One fish was released after an hour of post-surgery observation. We pointed out this FSP deviation and EPA's expectation of a change request prior to their making changes in the field but we wanted to let you know and get EPA direction on any additional action needed here.
